

HVACR TECHNICIAN

Air Source Heating & Air Conditioning has helped people feel more comfortable for the last 20 years with our quality indoor air products. Come be a part of a team where you make the difference.

The HVACR Technician is responsible to diagnose, install, service and repair refrigeration systems and equipment such as condensing units, compressors, and evaporators in residential and commercial heating and air conditioning systems. Some duties of the job include connecting refrigeration lines and electrical power sources, handling hazardous refrigerant substances, and checking systems and equipment for leaks. Perform inspections and test systems to verify plan and specification standards of compliance. Prioritize and complete tasks in a timely manner. Technicians will often use system blueprints or manufacturers' instructions to complete a job
